

Answer To the Question of assignment-25

1.

You are required to develop a fully functional payroll management software using the Laravel framework. The application should have the following features:

User Authentication:

Simple Employee Leave Application Management System

User Type

Employees: Can request leaves.

Managers: Approve or reject leave requests.

User Type

Define leave categories like vacation, sick leave, etc

Leave Requests:

Employees request time off with dates and reason.

Managers get notified of new requests.

Approval Process:

Managers approve or reject requests.

Notifications Email sent to employees.

Leave Balances:

System tracks available leave days.

Basic Reporting:

Simple reports on leave history.

Step 1: Database Setup

Configure the .env file with your database credentials named

DB_DATABASE=dsa_leave_management

Step 2: Design and Implement Database Tables

Create migration files :

2021_12_11_143933_staff_data.php

2021_12_11_144004_user_account.php

2021_12_11_144121_leave_data.php

2023_01_13_164324_create_leave_type.php

Edit the generated migration files:

database/migrations/2021_12_11_143933_staff_data.php

public function up()

```
{
    Schema::create('staff_data', function (Blueprint $table) {
        $table->increments('auto_id');
        $table->string('staff_id');
        $table->string('firstname');
        $table->string('lastname');
        $table->string('dob');
        $table->string('email');
        $table->string('phone_number');
        $table->string('position');
    });
}
```

database/migrations/2021_12_11_144004_user_account.php

public function up()

```
{
    Schema::create('user_account', function (Blueprint $table) {
```

```
$table->increments('auto_id');  
$table->string('staff_id');  
$table->string('username');  
$table->string('password');  
$table->string('account_type');
```

```
});
```

```
// Insert some stuff
```

```
DB::table('user_account')->insert(  
    array(  
        'staff_id' => "00001",  
        'username' => "admin",  
        'password' => "admin123",  
        'account_type' => "admin"  
    )  
);
```

```
}
```

database/migrations/2021_12_11_144121_leave_data.php

```
public function up()
```

```
{
```

```
Schema::create('leave_data', function (Blueprint $table) {
```

```
$table->increments('auto_id');  
$table->string('staff_id');  
$table->string('type_of_leave');
```

```
$table->string('description',5000);  
$table->date('date_of_leave');  
$table->datetime('date_of_request');  
$table->string('approval_status');
```

```
});
```

database/migrations/2023_01_13_164324_create_leave_type.php

```
public function up()
```

```
{
```

```
Schema::create('leave_type', function (Blueprint $table) {
```

```
    $table->id();
```

```
    $table->string('leave_type_name');
```

```
    $table->integer('count');
```

```
    $table->date('from_date');
```

```
    $table->date('to_date');
```

```
    $table->boolean('active');
```

```
});
```

Run migrations:

```
php artisan migrate
```

Create controller:

```
*****DatabaseController.php
```

```
<?php
```

```
namespace App\Http\Controllers;
```

```
use Illuminate\Http\Request;
```

```
use Redirect;
```

```
use Session;
```

```

```

Create app->Mail -> MailNotify.php

Edit the below code

```
<?php
```

```
namespace App\Mail;
```

```
use Illuminate\Bus\Queueable;
```

```
use Illuminate\Contracts\Queue\ShouldQueue;
```

```
use Illuminate\Mail\Mailable;
```

```
use Illuminate\Queue\SerializesModels;
```

```
class MailNotify extends Mailable
```

```
{
```

```
    use Queueable, SerializesModels;
```

```
    public $data=[];
```

```
    /**
```

```
     * Create a new message instance.
```

```
     *
```

```

* @return void
*/
public function __construct($data)
{
    $this->data= $data;
}

/**
 * Build the message.
 *
 * @return $this
 */
public function build()
{
    return $this->from('seven.soft.testing@gmail.com', 'Cambo Tutorial')
        ->subject($this->data["subject"])
        ->view('emails.subscribe')->with("data",$this->data);
}
}

```

Create app-> Exceptions-> Handler.php

Edit the below code:

```
<?php
```

```
namespace App\Exceptions;
```

```
use Illuminate\Foundation\Exceptions\Handler as ExceptionHandler;
```

```
use Throwable;
```

```

class Handler extends ExceptionHandler
{
    /**
     * A list of the exception types that are not reported.
     *
     * @var array<int, class-string<Throwable>>
     */
    protected $dontReport = [
        //
    ];

    /**
     * A list of the inputs that are never flashed for validation exceptions.
     *
     * @var array<int, string>
     */
    protected $dontFlash = [
        'current_password',
        'password',
        'password_confirmation',
    ];

    /**
     * Register the exception handling callbacks for the application.
     *
     * @return void
     */
    public function register()
    {

```

```

        $this->reportable(function (Throwable $e) {
            //
        });
    }
}

```

Create model:

App->Models-> User.php

Edit the below code:

```
<?php
```

```
namespace App\Models;
```

```

use Illuminate\Contracts\Auth\MustVerifyEmail;
use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Foundation\Auth\User as Authenticatable;
use Illuminate\Notifications\Notifiable;
use Laravel\Sanctum\HasApiTokens;

```

```
class User extends Authenticatable
```

```

{
    use HasApiTokens, HasFactory, Notifiable;

```

```
/**
```

```
 * The attributes that are mass assignable.
```

```
 *
```

```
 * @var array<int, string>
```

```
 */
```

```
protected $fillable = [
    'name',
    'email',
    'password',
];

/**
 * The attributes that should be hidden for serialization.
 *
 * @var array<int, string>
 */
protected $hidden = [
    'password',
    'remember_token',
];

/**
 * The attributes that should be cast.
 *
 * @var array<string, string>
 */
protected $casts = [
    'email_verified_at' => 'datetime',
];
}
```
